From Microsoft Outlook to HCL Notes

—

A guide

(which can also be used for experienced Notes user)

By HCL Ambassador Hogne Bø Pettersen

V. 1.0: 11.03.2020

About this document

While Notes is so much more than just an email, calendar, and contacts application, it is usually among one of the most important features of the client.

Outlook is the email and scheduling client with the largest user base. This means that if you get new employees in your company, they were most likely Outlook users in their previous position. If you are using Notes for email and calendaring, there will be a period of adjustment for the employee.

In the past 15 years I've had several user training sessions for users that comes from the world of Outlook to the world of Notes. This posting is therefore built on my long experience about what the usual questions and challenges are.

This article will hopefully help you make the transition smoother and make it easier for the employee to adapt to working with Notes. I have therefore included tips on how you can set up the client to mimic Outlook behaviour (like opening everything in new windows).

In addition, I have described how you use a lot of the functions that Outlook, and Notes have in common, that might be a bit different in Notes.

I also think this article will be of great help to users who have used Notes for years.
Notes client settings and functions

Open documents in new windows

In Outlook, any document that you create or open will appear in its own window. This is of course possible in Notes as well.

1. Go to the menu **File** and choose **Preferences**
2. Click on **Windows** in the **Preferences** screen
3. Select **Open each document in its own window** under **Window Management**: (Selecting this option will ensure that every document you open will be displayed in its own separate window, making it easier to work on multiple documents simultaneously.)
4. Click **Apply** and then **OK**
5. Every window and document will from now be opened in its own window

*PS!* You can also open any Notes document in a new window at any time by right clicking on it in the view or folder and choose **Open in New Window**

Preview pane

Just like in Outlook, you can choose whether you want to have a preview pane for your email, calendar, and to do entries, and if it should be displayed at the bottom or to the right.

Click on button named Show to the upper right, above the mail, calendar or to do folder you are currently working with:
You can also control whether you want the email or document to be marked as read or not when it's been displayed in the preview pane:

1. Go to the menu **File** and choose **Preferences**

2. Click on **Basic Notes Client Configuration** in the left side menu

3. In the big **Additional Options** field you check *Mark documents when opened in preview pane* if you want the emails or document to be marked as read after being displayed in the preview pane. If you don't want that, you have to uncheck this option:

4. Click **OK**

PS! You can also mark a read document as unread or an unread document as read by hitting the **Insert** button on your keyboard

**Shortcuts**

In Outlook you have shortcut icons for the mail, calendar, and To do in the lower left corner. In Notes you have several ways to get shortcuts for **Mail**, **Calendar** and **Contacts**:

**Shortcut buttons**

Click on **View -> Show Shortcut Buttons** and choose **Mail**. Then repeat this for **Calendar** and **Contacts**:
You will now see these shortcut buttons under the menu line:

Unfortunately **To do** is not available as a shortcut button.

**Bookmarks**

However, **To do** is available as a bookmark, together with **Mail**, **Calendar** and **Contacts**.
You find these bookmarks under the **Open** button:

You can pin the bookmarks under the **Open** button to be permanently visible by right clicking on the **Open** button and choose **Dock the Open List**. You can also choose **Use Large Icons**. Now **Mail**, **Calendar**, **Contacts** and **To do** will have permanent shortcuts to the left in the Notes client:
Spell checking

Spell check can be done in any rich text field, both in emails, calendar and to do entries, and documents in other Notes applications.

Turn on spell checking

1. Go to the File menu and choose Preferences

2. Click on Spell Check:

3. To activate spell checking, click on Enable Instant Spell checking

4. You can choose the default language from the list Primary Dictionary (if it's not there, contact your administrator to have it installed), by clicking on it and then clicking on the button Set as Default

5. Set any other settings you want and click OK

Using spell checking

After turning it on, spell checking will now be performed in all rich text fields. Notes will underline spelling errors with a red line:
The spell check in Notes is not nearly as advanced as in Outlook, but it's still very helpful.

**Spell checking several languages at once**

Outlook will automatically detect what language you write in while spell checking. So if you change from Norwegian to English, and both of these languages are installed on your computer, it will change the spell checking to the language you are currently writing in.

Notes doesn't do that. If you want to spell check in another language than the default language, you have to manually change what language you want to use for spell checking.

Here is how you can spell check more than one language at once in Notes:

1. Write the text:

   ```
   Norsk:
   Dette er et ord som er stav feil
   
   English:
   This is a word that is spelled wrong
   ```

2. Highlight the text you want to spell check in a different language from the default language:

   ```
   Norsk:
   Dette er et ord som er stav feil
   
   English:
   This is a word that is spelled wrong
   ```

3. Hold down the **CTRL** key on your keyboard and hit the **K** key. Or go to the menu **Text** and choose **Text Properties**:
4. In the popup window, go to the **Language** field at the bottom and choose the desired language:

5. The language will now be changed for the highlighted text:

   Norsk:
   Dette er et odd som er støtt feil

   English:
   This is a word that is spelled wrong

**Rich text formatting in HCL Notes**

Rich text fields are fields in Notes where you can format the text with colors, photos, tables, different types of fonts and so on. The email body field (where you write the message text) is an example of a Notes rich text field. Rich text fields are also in calendar and To do entries and they can also be in any Notes application you use.

You can format the text in a rich text field in most of the ways that you are used to:
There is a toolbar for all these formatting options above the document, under the row showing all your open windows and documents:

If you can't see this toolbar, it could mean that it's either turned off, or that you aren't in a rich text field right now. You can check this in the menu View -> Toolbar:
Make sure **Text Properties** is checked. If you choose **Show Toolbars Only When Editing**, the toolbar will only show up when you are in a rich text field. If **Hide All Toolbars** is checked, all toolbars will be hidden all the time.
Mail

Creating a new email

Creating emails in Notes is very similar to how you do it in Outlook.

1. Click **CTRL + M** to create a new email (or click the **New** button if you are in mail folder). You can do this even your mail application isn’t even open in Notes.

2. To add email addresses you can simply start typing the name or address in the **To**, **Cc** or **Bcc** field (if the **Bcc** field isn't displayed, click on the button called **Display** above the mail form and choose **Bcc**). You can also click on **To**:

   ![Email Form](image)

   a) You will now see this popup:

   ![Select Addresses](image)

   b) You can now select people from your company directory. If you want to add people from your personal Contacts, change to your Contacts application in the **Directory** pull down field:
c) You can use the **Find names starting with** field to type the beginning of a person's name to find the person you are looking for, if you don't want to scroll through the list.

d) Use the buttons to the right of the address field to add people and addresses to the **To**, **Cc** or **Bcc** fields.

e) Click **OK**

3. You can now write your email. To add attachments you can simply drag and drop files into the email.

**Sorting email folders and views**

**Newest mail on top or bottom**

To make sure the newest email is always on top or bottom in your inbox or other mail folders do this:

1. Go to **File -> Preferences** and choose **Mail**:

   ![Mail Preferences in File Menu]

2. Click on the tab **Basics**

3. Scroll to the bottom and choose your setting here:

   ![Mail Preferences with Options]

   - **Automatically sort date columns (takes effect after reopening mail tab):**
     - Most recent on top
     - Most recent on bottom
4. Click OK

5. Close Mail and re-open it again

**Sorting email by column**

You can sort your email folders by clicking on the column names at the top:

You can sort by sender (Who), Subject, Date, Size, recipient icon, attachments, and flagging.

Click on **Who** to sort by sender alphabetically or **Subject** to sort by subject alphabetically. Click once more to go back to the standard sorting.

If you click on **Date** you switch between having the newest email on top or at the bottom.

If you click once on **Size** the largest emails will be put on top. If you click once more the largest emails will be at the bottom. If you click a third time the folder will go back to the standard sorting.

Clicking on recipient icon, attachments or flagging will sort the folder based on these. If you click once more it will go back to the default sorting.

**Group by Date**

Just like in Outlook you can group emails by date as well. Click on the **Show** button in the upper right of the folder and choose **Group By Date**:

All emails in that folder will now be grouped like this:
If you click on the Date column to change the sorting, the grouping will reflect this. However, if you click on any other sorting, the Group by Date sorting will be paused until you sort the folder by date again.

**Unread mail only**

You can also choose to see unread mails only inside a folder. Click on the Show button in the upper right of the folder and choose Unread Only. All read mails will no longer be displayed, until you turn this off again. All sorting options will work.

**PS!** If you have a preview window, and it’s set to mark an email as unread after being previewed, it will disappear from the folder when you move to the next email. Do not panic, just turn off Unread Only.

**Search for emails**

To search for emails in Notes, simply click inside the folder you want to search and start typing:
In the example above the folder was sorted by **Who** when I started typing. You can see this by the fact that **Who** is listed in the **Find in** field.

You can change this by clicking on the pulldown list:

If you change this to **Subject** or **Date**, the folder will be re-sorted in the background.

After choosing the column you want to search, you simply write what you want to search for and click on the **Find** button. If any email has your search expression in the start of the selected column’s value, it will take you to that email.

If you choose **Any column** you can search for any expression in any column. It does not even have to start with that expression:

In the example above, it would find any email containing the word **tickets** in either **Who** or **Subject**, even if the column value started with another word. Example: It would find both **Tickets for you**, **Your tickets** and **Bus tickets**.

**Flag an email for follow up**

You can flag an email for follow up simply by right clicking on the email:
You can also mark one or more emails and then hit the flagging button above the folder:

Under **Add or Edit Flag...** you can set due dates and a lot of other settings. Read all about flagging of emails in [this tip](#).

You can see a view of all your flagged emails if you click on **Follow Up** in the left side menu in your email. You can also see them constantly listed in the left side menu by scrolling down to the bottom of the left side menu.

**Click on the small arrow:**

**PS!** If you have Notes V11 or newer, you don't need to look for this small arrow. You can just expand the menu item called **Show Mini View**.

After clicking on the arrow you can choose **Follow Up** in the pulldown menu that appears:

Now the list of emails you have flagged will be displayed in the left menu.

**Turn an email into a meeting or To do**

To turn an email into a calendar entry, such as a meeting invite, or a To do, by right clicking on the email and choose **Copy Into New**:
If you click on **Calendar Entry** you can choose what kind of calendar entry it should be. A pop up will appear, and if you select **Meeting**, it will prepare a new meeting document. Notes will automatically populate the invite fields with all the people in the To, Cc and Bcc fields.

### See your calendar while using your email

In Outlook you must actively choose to display your calendar in the right sidebar. In HCL Notes, it’s always there for you, and unlike Outlook it will also show entries from any imported calendars (Outlook only displays your main calendar).

Simply click on **Day at a Glance** in the right sidebar panel, and you can see all your appointments for today:
You can click on the arrows to navigate from one day to the next, and you can navigate through the months in the calendar underneath the calendar entries.

To get back to today, click on the Today button.

PS! If the right sidebar panel isn't visible, just click CTRL + 9 on the keyboard.

**Quick rules**

Like in Outlook, you can create quick rules based on the currently selected email:

1. Click on the email you want to create a rule from

2. Click on the More button above the folder and choose Create Quick Rule:

3. You will then get a popup window where you can choose what should trigger the rule:
In the example above I have set it to the following:

Under 1 I have set the condition to match the displayed Subject

Under 2 I have chosen that at least one of the selected conditions under 1 should be met. This is not necessary here since I have only selected one condition, but you do have the option for selecting more than one.

Under 3 I have selected that emails matching this rule should be automatically moved to the folder Under arbeid. You choose a folder by clicking on Select... and you can also create new folders in the popup window that will appear

**Bonus tip if you have Notes V10 or newer:** If you want this rule to be triggered on emails that already are in your inbox, you click on Run Now on Inbox.... If you want it to trigger on matching emails no matter what folder they are in you click on Run Now On All documents....

4. Click on OK when finished

From now on all emails with that subject will automatically be transferred to the selected folder.

You can administer your rules, as well as create even more complex rules, by clicking on the More button and then selecting Mail Rules -> Manage Rules:

**Mail signature**

**Creating the signature**

You create your email signature like this:
1. Open any folder in your email

2. Click on the **More** button above the folder and select **Preferences...**:

3. You will now be taken to the **Mail** preferences window. Click on the **Signature** tab:
4. Check **Automatically append a signature to the bottom of my outgoing mail messages** to make sure the signature is always added to your emails

5. You have the following signature types:

- **Rich Text**: Here you can add formatted text, hypertext links and images (like in the image above)
- **Plain Text**: Here you can add nothing but a pure text signature. This will be added whenever you send an email as pure text, or you manually select it before sending an email
- **HTML Image or file**: If you choose this, you will be asked to upload an image file or an HTML (web) file

6. Some people like to have a different signature when they reply to, or forward, a message. You can therefore click on the tab **Reply and Forward Messages**, where you will get these options:

   - **Default**: If you choose this, it will use the same signature you set for **New Messages**
   - **Rich Text**: If you choose this you get a rich text field where you can create a totally different signature with formatted text, hypertext links and images
   - **Plain Text**: If you choose this you can create a different pure text signature
   - **HTML or Image File**: You can upload a different image or HTML file to use as a reply or forward signature

7. Click on **OK** when finished

The signature will now always be added to your emails.

**Different signatures**

In Outlook you can have different signatures for different purposes and email accounts. This is not possible in Notes, but what you can do is create image or HTML files with alternative signatures. Add them to a folder on your PC or network drive.
If you want to use an alternative signature, you do it like this:

1. Create a new email or reply to an email
2. Place your cursor just above your standard signature (*this is important!*)
3. Click on the **Signature** button and choose **New Signature from File...**:

4. Your standard signature will now be removed from the email, and you will see this popup window:

5. Click on **Browse** to find the signature file
6. Click on **OK**
7. The signature will now be added to your email, instead of the standard one

**Mail conversations**

Just like in Outlook, you can in Notes choose whether you want the emails in a folder to be displayed as conversation threads or not.

You do this by clicking on the **Show** button in the upper right corner of the folder, and choose **Conversations**:
Notes does have a functionality here that Outlook doesn't have. Whenever you click on an email that is a part of a conversation thread, even if the entire folder is set to display Individual Messages, you will still get a twistie to the left of the email:

If you click on this, you will still be able to see the entire conversation, even if the folder is set to display individual messages only.

Notifications

Like in Outlook a sound will play, you will get popup notifications and/or a slide in summary and an envelope icon will appear in the taskbar when a new email arrives.

You can control these notifications by clicking on File -> Preferences and then expand Mail and choose Sending and Receiving. Under the section called Receiving you can choose what notifications, if any, you want:

Out of office

Like Outlook, Notes gives you the ability to set up an automatic reply that should go out to people who send you an email. In Outlook it's called Automatic Replies, while in Notes it's called Out of Office:
1. Click on the More button above the folder and choose Out of Office...

2. You now get the Out of Office form in Notes. Here you can set the date for when you are leaving, whether you should be available for meetings or not (people will see you as busy when checking your schedule if you choose not to be), a subject for the automatic reply and the mail message itself.

3. You can also set an Alternate notification:

   By clicking on To, you can choose people from your personal contact list, as well as the corporate directory, who should receive an alternate notification. You can also add emails directly in the field to the right of the To function. You then set an alternate subject and message text.

4. You can also set up who should not get an Out of Office message from you under Exclusions:
In this example I have set that any email sent from hotmail.com you should not get an automatic reply. I have also added that any message containing the phrase Nigerian prince in the subject shouldn't get a reply either. You add a phrase by entering it in the field A message subject contains any of these exact phrases and then click on Add Phrase. To remove a phrase, click on it in the big square, and then click on Remove Phrase.

5. When you are finished you can click on Enable and Close at the top if you want to activate the Out of Office agent. If you have set it to start at a later date, it won't start sending out automatic replies before the selected date and time has been reached. If you click Save and Close, you will only save this as a draft, and it will not be activated.

Spellchecking your email

Spellchecking while writing

Check the spell-checking sub sections in the Notes client settings and functions section above

Spell-checking before sending

You can also do a last spell checking before sending the email. It will also spell check the Subject line.

Here is how you turn this on:

1. Go to File -> Preferences
2. Choose **Mail** in the preferences window:

![Mail preferences window](image)

3. Make sure the **Spell-check messages before sending** option is checked under **Message Options**

4. Click **OK**

When you now write an email, and hit send, Notes will spell check the **Subject** line and the main text of the message:

![Spelling check dialog](image)

- You can choose which language you want to use as **Dictionary**
- You can skip a word and jump to the next or you can skip all by just clicking on **Send As Is**
- You can choose a suggested word from the list, or type your own correction, and then click **Replace**. Notes will then jump to the next misspelled word
- You can add a word to the **Dictionary**, so that Notes won't claim that it's misspelled the next time
- You can click on **Spelling Options...** to tell Notes to ignore words in uppercase and with numbers

**Prevent sending emails with blank Subject line**

1. Go to File -> Preferences
2. Choose **Mail** in the preferences window:

![Mail preferences window](image)

3. Make sure the **Warn me about blank message subjects** option is checked under **Message Options**.

4. Click **OK**.

Notes will now warn you if you try to send an email without a subject line.

**Formatting email text**

Check the *Rich text formatting in HCL Notes* sub section in the *Notes client settings and functions* section above on how to format text in an email.

**Set default email font**

You can change the default font in email in this way:

1. Write a text with the font that you want to set as a standard font.

2. Highlight it:

   ![Highlighted text](image)

   This is the font I want to use

   Hogne Bø Pettersen
   IT-consultant, writer, photographer and speaker
   +47 911 93 144
3. Go to the **Text** menu and choose **Set Current Font as Mail Default**:

![Set Current Font as Mail Default](image1)

4. Notes will confirm your choice:

![Set Current Font as Mail Default Confirmation](image2)

5. Click **OK**

Now Notes will always use this as your default font in emails

**Add another email account**

Unfortunately, you cannot add another email account to Notes like you can in Outlook.
What you can do is create group mail applications that you can open like you open your own email. You can also be given access to other people’s email, which you then can open up like your own mail application.

However, these will be in their own windows in the Notes client, and not collected in the left side menu, like in Outlook.
Calendar

Share your calendar

You can share your calendar with other users.

1. Go to the menu **File** and choose **Preferences**

2. Click on **Calendar** and **To do** and then on **Access and Delegation**:
3. Click on **Add...**:

![Add People/Groups dialog box](image)

- **Person or Group**: Choose if everyone should have access, or just the persons or groups that you add by clicking in the field to the right of *Just this person or group*.

- **Components**: Select what they should have access to.

- **Access**: Choose if they only should be able to read your calendar, or if they should also be given full access (there's nothing in between).

- **Automatic Forwarding**: Enable automatic forwarding to manage your calendar when it is not open and on display. These settings apply even if no components are delegated, and they apply to all auto-forwarded messages.

4. You can under **Person or Group** choose if everyone should have access, or just the persons or groups that you add by clicking in the field to the right of *Just this person or group*.

5. Under **Components** you select what they should have access to.

6. Under **Access** you choose if they only should be able to read your calendar, or if they should also be given full access (there's nothing in between).

7. Click **OK** when finished.

8. You will now see the person and how much access they have:

![Delegating access dialog box](image)
9. You can later change the access via the **Change Access...** button or remove the person from the access list by clicking on **Remove**

**Add a shared calendar to your calendar**

You add a shared calendar like this:

1. In the left menu of your Notes calendar, you expand **Show Calendars** and click on **Add a calendar...**:

2. This window appears:

3. You can now search for a Notes user and then choose the colors you want this user's calendar entries to be displayed with. Click **OK** when finished

4. To toggle on and off this users calendar, you can check and uncheck the calendar from the list of your calendars:
Color code calendar entries

Just like in Outlook, you can also color code your calendar entries. This means that calendar entries matching certain criteria that you set will be colorised so that you can differentiate the various appointments with a quick glance.

You do this by adding a category to a calendar entry:

1. When you create a calendar entry, like a meeting, you can add a category by clicking here:

   ![Category input field](image1)

   If the **Category** option is not there, click on the button **Display** and choose **Category**:

   ![Category options](image2)

2. After clicking **Category**, you will get a list of all your categories in popup window:

   ![Categories list](image3)
3. You can add more than one category by checking it. To add a new category, simply type it in the **Add category** field.

4. Click **OK**.

5. To the right of the Category field you find an option called **Assign Colors...**:

6. Click on it and this popup appears:

7. Click on one of the buttons looking like the button the arrow in the illustration above is pointing at to select the category or categories you want to give a certain color.

8. Then you choose the background color and text color for this category.

9. Click **OK** when finished.
10. The calendar will immediately be updated with this color. Here is an example of a calendar with color coded entries:

![Calendar Example]

**Change calendar views**

In Outlook you choose in the top ribbon menu if you want to see a calendar displayed as a day, week, work week, month or as a schedule.

**Period views**

In Notes you switch between a day, two days, a work week, a week or a month and as a weekly planner under the left side menu item called **Views**:

![Period Views in Notes]
Summary or timeslots

You can switch between viewing the calendar as a summarised calendar or as timeslots by clicking on the **Switch** button in the upper right of the calendar:

Timeslots will display the calendar like this:

<table>
<thead>
<tr>
<th>Date</th>
<th>Time</th>
<th>Event Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Tuesday, March 2, 2021</strong></td>
<td></td>
<td></td>
</tr>

</tr>
</tbody>
</table>
**Week numbers**

Week numbers are displayed in the calendar footer at the bottom of the calendar. You turn it on like this:

1. Make sure the calendar footer is turned on by clicking on **Display** and then choose **Calendar footer**:

   ![Calendar footer menu](image1.png)

2. The calendar footer will now be visible under the calendar view. Click on the little pulldown arrow to choose **Week [Number]**:

   ![Week number selection](image2.png)

You can also do this in **Day at a Glance** in the right sidebar panel.

**Find available time**

**Check one person's schedule**

You can quickly check if a colleague is available by right clicking on an email from this person and choose the name of the person and then select **Find Available Time...**:
You will now see a pop up window where you can select a time where both of you are green and then you can click on **Create Meeting**.

**Check the schedule for meeting participants**

If you are creating a meeting you can check when people you have added to the meeting are free. You do can do this by clicking on the **Find Available Times** tab, next to **Description**:

If the bar turns green, it means everybody whose schedule you have access to are available. If it's red, it means one or more of the invitees are busy at the proposed time.

You can move the bar around to change the date and time of the meeting. You can even increase or decrease the size of the bar to change the length of the meeting.

**View Invitee Status**

It is very easy to check who have replied to your meeting invite, and whether they have accepted or not. Simply open the meeting document and click on the button **Invitee Status**.
Contacts

Like in Outlook, you have your own personal Contacts app in your Notes client. You can add contacts and organise them in groups. You can also control the addresses that are displayed when you type email addresses into the To field in a new email.

Add contact

From Mail

You can add a contact from an email by right clicking on the email and choose Add Sender to Contacts... A popup window will appear where the email address and name fields automatically will be filled out. You can then add more details, if you want. After clicking on OK, the contact will be added to Contacts.

From Contacts

Open your Contacts application and click on the My Contacts item in the left side menu and then simply click on the New button above the contacts view. A popup window will appear where you can add some basic information about the new contact.

If you want to fill in more details about a new contact, click on the pulldown arrow to the right of the New button and choose Contact. A form will now appear where you can add a lot of details about the new contact.

Create contact group

You can also organise your contacts into groups.

1. Open your Contacts application and click on the Groups item in the left side menu

2. Give the group a name and a description:

<table>
<thead>
<tr>
<th>Mark private</th>
</tr>
</thead>
<tbody>
<tr>
<td>Group Name: New Notes users</td>
</tr>
<tr>
<td>Description: A group for previous Outlook users who need user training in Notes</td>
</tr>
<tr>
<td>Members:</td>
</tr>
<tr>
<td>Separate multiple entries with a comma, semicolon, or new line.</td>
</tr>
</tbody>
</table>

3. Go to the field Members

4. Start typing the name of the contact you want to add. Notes will automatically suggest names from already existing contacts. Click on the one you want and click the enter key on your keyboard to start adding a new one. You can also add the email address of
contacts that aren't in your Contacts register. Just type the email address and hint the enter key. You can also click on Members. You will then see this popup:

You can now select people from your company directory. If you want to add people from your personal Contacts, change to your contact application in the Directory pull down field:

You can use the Find names starting with field to type the beginning of a person's name to find the person you are looking for, if you do not want to scroll through the list

5. Click OK

6. Click Save and Close

You can now use the group when sending emails or meeting invites.

Recent contacts

When you create a new email and start typing the address or name of a person in the To, Cc or Bcc field, Notes will suggest names and addresses for you:
Sometimes Notes will suggest email addresses or contacts that you don't want to see in the typeahead. You can fix this in Contacts:

1. Open Contacts

2. Click on the **Recent Contacts** item in the left side menu

3. Find the address or person you don't want to see in the typeahead anymore and click on him or her

4. Now click on the button over the view called **Hide in Typeahead**

It will now no longer show up in the typeahead. If you want it to show up again, you just repeat step 1-3 and then click on **Show in Typeahead** in step 4
To do

In Outlook you have an application called Tasks. In Notes this is called To do.

Create a To do

As described under Mail, you can turn an email into a To do, just like in Outlook. But you can also create a To do from scratch:

1. Open the To do application

2. From any folder inside To do, you can click on the New button in the upper left corner above the folder. This form will appear:

   ![To Do Entry Form](image)

   - Subject: 
   - When: Due by: , Start by: 
   - Who: Assign to: Me, Others
   - Category: 
   - Description
     
     <Enter the description of this task>

3. You can set a priority, a due date, a start date and whether this is a To do that should be repeated or not (if you click on Repeat you can choose a whole range of repeating patterns). You can also assign this To do to another person. In addition you can categorize it and add further details in the rich text field Description

4. If you choose a due date, an option called Notify Me will appear in the upper right corner of the form:
If you click on the clock icon you can choose when you should be notified, and how.

5. Click on **Save and Close** when finished

**Mark a To do as completed or incomplete**

To mark a To do as completed, simply right click on it and choose **Mark Complete**. You can also open it for editing and click on the button **Mark Complete**.

You mark a completed To do as incomplete in the exact same way. To see your completed To dos, click on the menu item **Complete** in the left side menu in the To do app.
Summary

Hopefully, these tips will ease your users transition from using Outlook to using Notes instead as their email, calendar, and contacts application.

It will probably also give a lot of good tips to already experienced Notes users.
